

c-BMS release notes

New in this release:

- ✓ Revert change in SRAM data layout introduced in 2.5.3.
- ✓ Remove limitation on charge complete deadband.

BMS Creator:

- ✓ Include the new firmware for bootloading.

c-BMS version 2.5.4 and Creator v2.5.4

ABOUT THIS RELEASE

The c-BMS v2.5.4 release includes changes for the MCU application firmware and the supporting Creator PC tool.

FIRMWARE FEATURES

This release includes a fix for changes in the SRAM layout introduced in 2.5.3. It caused data from the previously installed SW to be overwritten and thus requiring the BMS to be reconfigured.

It also removes the limit on the charge complete deadband of 20 mV. The deadband is now completely controlled by the configuration value. The limitation was introduced in 2.5.1.

On behalf of the Lithium Balance Support and R&D team
